aluminium roller fitting for sliding doors
astec b.1000

roller fitting made of aluminium for floor guided sliding doors with door leaves made of glass (thickness 10/12mm). narrow, shallow roller guide tracks integrated in the floor bear weights of up to 300 kg per metre.

the visible roller guide track is 25mm wide and 6mm deep. precision rollers with needle bearings regularly positioned along a guide rail ensure smooth sliding. the glass panel is protected and cushioned by a u-profile edge guard that is firmly fixed to the glass.

door load is transferred entirely into floor. u-profile ceiling guide prevents the door leaf from lifting out.

all visible surfaces are anodized EV1.

manufacturer: astec gmbh, design fittings (www.astec-design.de)

system includes:

1 pcs floor installation set complete, anodized EV1
including floortrack, roller guide track and coverprofile
